

REPORT ON INTER - SCHOOL COMPETITION GANIT KI BHASHA

Name: Aarushi Mohindru & Tejasva Shukla

Class : IXth B

Position : III

Aarushi Mohindru and Tejasva Shukla of IXth B participated in a Virtual Interschool Competition of Science and Mathematics organized by St. Marks Senior Secondary School namely Quest on 24 th August 2021 . The name of competition was Ganit Ki Bhasha , it was conducted virtually on Microsoft Teams . The students were given mathematical terms to explain a concept using a song of 1 – 2minutes . Both are students have wonderfully created the song on Triangles and secured the third position in the competition .

SONG SUNG BY THEM

Topic: Triangles

Lyrics:

Triangles! Triangles! Tri-Angles!
The name says it all,
It's a shape with three angles.

Triangles are of types three:
Acute, right and obtuse!
The concept is quite easy-
Don't confuse.

Acute: angles less than 90
Right: angle equals 90
Obtuse: angle greater than 90
These are the triangles mighty!

Some triangles are congruent
To each other, I meant.
A triangle has six parts
Oh! Where do I start?

To prove their congruence
Relax yourself, don't be tense.
All you need are parts corresponding
And a little understanding!

Congruency has five basic types
Think of them as five parallel pipes.
SAS is side angle side
ASA is angle side angle
These are two of the congruencies tried,
The congruent triangles kept aside.

Triangles are as easy as they seem.
Start from the basic not the extreme.
Practice is the key to success
Gradually progress and try not to stress.
