Make the future **green** before it becomes bleak

JM International School, Dwarka celebrated The Earth week with a number of activities. Special sessions to sensitize students about emerging environmental problems were taken by the teachers. The primary students took the initiative to increase the green cover of the school premises by planting saplings and used waste material to make a useful craft out of it. Students wrote messages and pasted them to their belongings to remind themselves their role in protecting the earth.

The middle school students, on the other hand, checked their day to day habits by a Green Audit. Some switched to cloth or paper bags, others used old plastic bottles to grow plants, some opted drip method of watering plants while others switched to reusable pens. These changes brought large differences and became the main theme of the week. Students

prepared bookmarks highlighting their green resolution which would remind them their duty towards the planet.

A morning assembly was conducted on the theme of Earth Day. The students presented 'The Earth Song' and also showcased a choreography on 'Save the elements of Earth'. A presentation was also shown by the students depicting the importance of Earth Day and how it was started.
