

WORLD OCEANS DAY

8 June 2023

World Oceans Day, observed every year on 8th June, enhances public awareness about the importance of sustainable use of ocean resources, thereby promoting Blue Economy. It also highlights the unlimited potential for developing a healthy marine ecosystem that supports futuristic economic growth. This day inspires people around the world to share ideas about the issues impacting the ocean life and inspires people to take some concrete action at individual level in a community to make some difference in terms of preservation and conservation of oceans.

Oceans are the most diverse and significant ecosystem that play an integral role in both socio-economic development and climate action. Promoting 'Blue Economy', ocean conservation and sustainable use of marine resources that support futuristic economic growth are an intrinsic part of our endeavors to revitalize the marine ecosystem.

'Planet Ocean: Tides are Changing' – this year's theme for World Oceans Day, clearly highlights the concern, hope and optimism for rejuvenation and restoration of this ecosystem. It's time to 'act now' and take some concrete action to make some real difference in terms of preservation and conservation of oceans for future generations. Let's pledge to protect this vast, irreplaceable ecosystem that sustains us all!
