

## ITL Public School, Dwarka

### Orientation Session on Prevention of Communicable Diseases

**Venue:** Science lab

**Date:** 4 October, 2023

**Conducted by:** Dr. Atul Gupta (MBBS, MD, Clinical Development Medical Professional)

**‘Prevention is so much better than healing because it saves the labour of being sick’-**  
Thomas Adams

Health is indeed the greatest wealth for every individual. For children, the right to health is vital because they are vulnerable beings, more at risk to illness and health complications. When children are spared from disease, they can grow into healthy adults and contribute to the development of dynamic and productive societies. **ITL Public School** organized an orientation session for students of **Class- V** by Dr. Atul Gupta to emphasize on ‘Prevention of Communicable Diseases’ and learn some preventive measures against spread of communicable diseases. Dr. Atul Gupta, who happens to be a parent as well, was endearing to the children and encouraged them whole-heartedly.

The session was vibrant and interactive with maximum student participation. The resource person posed them with inquisitive questions which enhanced critical thinking and problem-solving skills of the children. He explained the concept of germs, diseases, their causes, mode of spreading and preventive measures in a simple and comprehensible language which captivated the audience. Children also raised their queries which were solved by the speaker in an emphatic manner. On the whole, a great learning experience for everyone.
